BUILDCHAT - Emiliano

Final development snapshot through live text/vision verification and user request to finish with minimal credits.

This is the actual user-facing development dialogue from the local session record, in order. Internal reasoning, system/developer instructions and raw tool payloads are excluded; tool results are documented separately in TESTS.md. Imported prior-conversation context is distinguished from this development conversation. No dialogue has been reconstructed or invented.

USER - 2026-10-19T03:59:24.346Z

[Imported ChatGPT conversation reference was supplied as background: Preparar brief Semana 10. The current user request follows.]

Continuing from [Preparar brief Semana 10](chatgpt-conversation://6ad55f16-e07c-83e8-8b91-dee60bd9d65b): Start Week 10 Business Bending in repo https://github.com/EmilianoCarballido-builds/buyer-guard-week-10. User demands strict credit efficiency and no extras: exactly 5 meaningful commits (assignment minimum 5), exactly 2 deploys (minimum 2), minimal tool calls, no unnecessary features. FIRST create docs/PACKET.md before any code, with image-generated mockup, Mermaid flowchart/swimlane, benchmark, three-sentence long view, scope cuts, stack/architecture, test plan. Use uploaded /mnt/data/BLUEPRINT_team week 10.pdf as reference: Emiliano USER declaration buyer-facing buy/wait/skip explanation with override; primary vacuum regret prevention; honor all six conditions especially buyer autonomy/shadow clause, transparency about unknowns, no affiliate incentives, privacy, checklist comparison. Build minimal free-stack Dragon Stack: real LLM + user-entered constraint data + one more (prefer vision or price data; choose simplest functional integration). Follow security floor. Document mechanical bug/fix/redeploy and synthetic persona screenshots/confusion/fix. Deliver live URL, GitHub link, PACKET_Emiliano.pdf, PERSONA_Emiliano.pdf, BUILDCHAT_Emiliano.pdf based on actual development transcript; provide demo recording guidance, don't fabricate video or transcript. Begin with packet, then implementation. Avoid work beyond rubric.

ASSISTANT - 2026-10-19T03:59:29.030Z

Voy a recuperar el Blueprint y las instrucciones para preparar primero docs/PACKET.md, manteniendo el alcance mínimo y el límite de cinco commits y dos despliegues.

ASSISTANT - 2026-10-19T03:59:51.271Z

I recovered the original assignment and Blueprint attachment. I’m using the image-generation and PDF skills for the required mockup and submission files; the implementation will stay focused on one purchase check, a plain checklist comparison, and the buyer’s override.

ASSISTANT - 2026-10-19T04:01:26.984Z

The Blueprint adds two important limits: one listing with two buyer questions, and a comparison against a free checklist. It also calls for five willing shoppers; I’ll clearly separate the required synthetic persona test from that real-user study, which we cannot claim has happened.

I’ll use Vercel’s deployment workflow and Gemini’s free-tier text-and-image API, so vision supplies the third Dragon Stack component without adding another service.

ASSISTANT - 2026-10-19T04:03:58.128Z

The packet is now the repository’s first commit, before any application code. The mockup is generated, and the hosting project is ready without a deployment yet. I’m building the minimal interface while you configure the free-tier API key.

USER - 2026-10-19T04:05:45.991Z

Chat remember. DO NOT USE A LOT OF CREDITS AND DO NOT MAKE MORE THAN IT IS ASKING PLEASE.

continue...

ASSISTANT - 2026-10-19T04:05:53.675Z

Understood. I’ll stick to exactly 5 meaningful commits, exactly 2 deployments, and only the required features and evidence. The packet is already commit 1; I’ll keep the remaining work and tool calls focused.

USER - 2026-10-19T04:06:10.319Z

ok

ASSISTANT - 2026-10-19T04:06:16.086Z

I’m continuing with the minimal build. The free-tier Gemini key is still needed in Vercel for the real AI test; I’ll finish the interface and validation first.

ASSISTANT - 2026-10-19T04:08:11.586Z

The interface and free checklist are now commit 2. It supports an independent buyer decision, export, and clearing the session. I’m adding the real AI endpoint and checking input limits; no deployment has been used yet.

ASSISTANT - 2026-10-19T04:10:12.682Z

Deployment 1 is live, and the checklist works. The six automated checks pass. The live AI request correctly reports that the key is missing, so I’ll reserve deployment 2 until that is configured and the required fixes are ready.

ASSISTANT - 2026-10-19T04:10:53.593Z

The required tests found two concrete issues: blank spaces were accepted as a product name, and the synthetic shopper could interpret “available money” as already excluding pending payments. I’ve fixed the blank-text check and will clarify that money is entered before pending payments. These are the only usability changes I’m adding.

ASSISTANT - 2026-10-19T04:12:26.870Z

The fixes are committed as commit 4, and all seven checks pass. I’m preparing the required PDFs from the actual packet, screenshot review, and conversation. The second deployment and final evidence remain reserved for the real AI test once the key is saved.

ASSISTANT - 2026-10-19T04:14:21.984Z

Completed 4 of 5 commits and 1 of 2 deployments. Seven tests pass; the required bug and persona fixes are committed.

- Live app

- GitHub

One blocker: add GEMINI_API_KEY in Vercel's environment settings, selecting Production. Don't click Redeploy or paste the key here.

Tell me when saved. I'll use the remaining deployment to verify real AI and vision, then finalize the PDFs and fifth commit-keeping your exact limits.

USER - 2026-10-19T04:15:00.208Z

[Imported ChatGPT conversation reference was supplied as background: Preparar brief Semana 10. The current user request follows.]

did not understand

ASSISTANT - 2026-10-19T04:15:05.709Z

The app needs a free Gemini API key to make the AI work. Here's what to do:

1. Open Google AI Studio and create an API key. Keep the free tier; don't enable billing.

2. Copy the key.

3. In the Vercel page already open, click Add Environment Variable:

- Name: GEMINI_API_KEY

- Value: paste your key

- Environment: select Production

4. Click Save. If Vercel offers Redeploy, skip it.

Then tell me "saved." Don't paste the key in this chat.

USER - 2026-10-19T04:17:38.035Z

[Imported ChatGPT conversation reference was supplied as background: Preparar brief Semana 10. The current user request follows.]

saved

ASSISTANT - 2026-10-19T04:17:42.242Z

I'll check that the key is saved, then use the second deployment to test the real AI and finish the required files.

ASSISTANT - 2026-10-19T04:18:48.394Z

The second deployment is ready. Gemini returned a real purchase explanation, and the live form now rejects blank text and shows the clearer money label. I'm checking image reading and the buyer's override, then saving the final evidence.

USER - 2026-10-19T04:20:17.921Z

[Imported ChatGPT conversation reference was supplied as background: Preparar brief Semana 10. The current user request follows.]

TE DIJE QUE NO USARAS TODOS LOS CREDITOS

USER - 2026-10-19T04:21:20.684Z

[Imported ChatGPT conversation reference was supplied as background: Preparar brief Semana 10. The current user request follows.]

KEEP GOING, BUT PLEASE, DO NOT USE THAT MUCH OF CREDITS. FINISH

ASSISTANT - 2026-10-19T04:21:28.701Z

Perdón; me extendí más de lo necesario. La IA de texto y visión ya funciona y los dos despliegues están hechos. Solo cerraré los PDFs y el quinto commit, sin más funciones ni pruebas adicionales.

Evidence status

Four implementation commits are pushed; this document is included in the fifth and final documentation commit. Both deployments are READY. Seven automated tests passed; real text, vision, deployed validation and buyer override were verified. Export delivery was not confirmed in the in-app browser. See TESTS.md for actual evidence and limitations.

Synthetic reviewer transcript

The exact fresh-context synthetic review is reproduced in PERSONA_Emiliano.pdf. It is not presented as a human study.
